

A270

RUST INHIBITOR

This product is formulated with a corrosion inhibitor designed to protect against rust, pitting and corrosion of steel and soft metals.

The inhibitor bonds to the metal surface by electron transfer, which ultimately produces a barrier to the dissolution of metal.

This product is well suited for use on undercarriages of vehicles after car wash application and may be used in a number of other corrosion prevention areas.

DIRECTIONS:

Dilute product 1:100 with water and spray on clean surfaces requiring protection. Do not rinse.
