

F370

TECHNICAL DATA SHEET

K-12 IODINE TEAT DIP

This product is a 0.5% minimum titratable iodine based teat dip containing glycerine. It is ideally suited as a pre-dip.

ACTIVE INGREDIENTS:

nonylphenoxy poly (ethyleneoxy) ethanol-iodine complex 6.0%
(providing 0.5% min. w/v available iodine)

DIRECTIONS: Immediately prior to milking, dip the teats in undiluted product. The iodine teat dip solution in dip cup should be changed if it becomes visibly dirty, if sediment is introduced, or if brown colour fades noticeably.

NOTE: Do not use for cleaning and/or sanitizing milking equipment. Do not dilute – product is ready to use. It contains a built-in colour indicator. As long as the iodine colour remains, its germ-killing power is working.
