AK – PLANT DETERGENT CL

AK - Plant Detergent CL is a concentrated alkaline detergent with bleach for cleaning automated calf feeders, pipelines, milking units and bulk tanks.

Automated Calf Feeders

Dilute product 0.75 – 1.0% (7.5 – 10 mL/L) with hot water. Maintain a temperature greater than 40°C during the wash cycle. Rinse thoroughly with potable water and drain.

Pipelines and Milking Equipment

Flush with potable water. Dilute product 0.25% (2.5 mL/L) with hot water. Circulate solution through equipment for up to 10 minutes, maintaining a temperature between 40 - 80°C. Manually scrub external components not coming in contact with the circulating cleaner. Rinse thoroughly with potable water and drain.

Follow alkaline cleaning with an acid CIP cleaner and sanitizer before milking.

Bulk Tanks

Flush with potable water. Dilute product 0.4% (4 mL/L) with hot water (40 - 80°C), using enough solution to properly operate the spray system. Spray wash for 10 minutes until tank is clean. Disconnect return feed and drain solution. Manually scrub external components with a fresh concentrated solution diluted to 1% (10 mL/L) with hot water. Rinse thoroughly with potable water and drain.

Follow alkaline cleaning with an acid CIP cleaner and sanitizer before milking.
