## TECHNICAL DATA SHEET

**BARN FRESH**

Barn Fresh is a **20X concentrated** liquid blend formulated for treating malodor caused by animal excrement in barns. It uses a multi-faceted and synergistic approach to control barn odour:

- ammonia gas from urine is neutralized
- deodorizers inactivate smelly acids, amines, mercaptans, thioesters and ammonia – the common odour-causing agents in sweat, urine, and decaying organic matter
- unlike powder deodorizers, liquid Barn Fresh flows to all of the same areas as urine
- it introduces and maintains a healthy colony of non-pathogenic bacteria that degrade animal waste and reduce other bacterial species and mould by competitive exclusion
- essential oils leave behind a clean, fresh scent

Barn Fresh is safe for animals and workers. It is fully biodegradable and non-corrosive. It does not introduce dust into the barn or into a worker's respiratory tract. Long term use of Barn Fresh will create a healthier stall for the animal and a better smelling barn for everyone!

**DIRECTIONS:**

Dilute Barn Fresh **1:20** with warm water  
(50mL Barn Fresh / Litre water)  
Mix by stirring or shaking.

Remove gross excrement and shavings. Spray **diluted** Barn Fresh over entire stall mat with a chemical sprayer. Refresh shavings.  
Use a coarse spray of droplets; do not create or inhale mists.
