## RUST AWAY RTU

RUST AWAY RTU selectively removes rust (iron oxide) from iron and steel. Simply soak rusty parts and watch the rust disappear.

- Environmentally friendly
- Safe on all metals, plastic, paint and most surfaces
- Non-flammable
- Non-acid
- No scrubbing or brushing needed
- Neutral pH
- No harsh fumes

### Directions:

1. Clean rusty parts, removing any grease or dirt.
2. Soak rusty parts in the solution. Ensure that the metal parts are completely submerged, and keep the lid closed to prevent evaporation.
3. Periodically check the parts to see if the rust has been removed. The soaking time will vary depending on the severity of the rust. Light rust may require approximately 2 hours, while heavy rusting could take up to 24 hours.
4. Once the rust is removed, take the metal parts out of the bath. Metal left in the bath after rust removal may darken in colour.
5. Dry the metal parts thoroughly.
6. The rust-removing solution may darken over time, but it can be reused until there is a noticeable drop in performance.
