WAREWASH SOLID HW

This product is a high-performance, solid, alkaline warewashing detergent formulated for use in commercial dish machines. It is supplied in a sealed capsule container designed for use with compatible water-driven capsule feeding systems.

Warewash Solid HW is engineered to replace traditional liquid alkaline warewash detergents, while maintaining excellent cleaning performance and precise titration control.

DIRECTIONS:

Use with a compatible capsule feeding warewash system. Three grams of our warewash solid is equivalent to 11ml of most liquid detergents. The target concentration should match that of a standard liquid alkaline warewash detergent. Adjust the feed setting incrementally to maintain the appropriate level of detergent to achieve consistent results.
