

J808

TECHNICAL DATA SHEET

**CITRIZYME
CARPET PRESpray
BIODEGRADABLE, NON-TOXIC**

This product is an excellent powdered pre-spray and carpet cleaning product for use in combination with hot water extraction equipment.

Citrizyme has the added benefit of d-limonene, which adds powerful cleaning and degreasing capabilities along with a lovely fresh citrus scent.

It is based on active detergents and builders and a blend of enzymes which digest organic stains (urine, vomit, pet odour and most protein stains) while providing odour control on contact. The product is particularly pleasant to work with as it contains no solvents or harsh chemicals.

DIRECTIONS:

Pre-spotting: Check for colour fastness, remove excess soil, and apply the solution with a fine mist or spray. Dilute powder in warm water at a rate of 3 oz/gallon (22 grams/Litre). Allow 5 to 15 minutes contact time before cleaning with hot water or steam extraction equipment.

Extraction Machines: Dilute at 5 grams/litre in hot water. Increase solution strength for more difficult cleaning applications.
