## LIQUID SIZING

This product is a unique mixture of sizing, brighteners and starch formulated for polyester and poly cotton blends. It is pre-gelatinized and "instantized", and mixes quickly and completely.

The product sizes a wide range of fabrics and fabric blends by imparting an invisible film on the fabric. It can be pumped in liquid systems without clogging valves or pumping lines. It disperses quickly, providing an excellent bright finish with no spotting or streaking and highlights pattern design. It improves flatwork finishing by overcoming limpness associated with blends. It does not reduce absorbency. Fabrics dry very quickly in a dryer and with this product there is no build-up on fabric, press heads or any other equipment. It reduces lint accumulations by approximately 50 - 70%.

**DIRECTIONS:** Keep the water level low in the washwheel (3" - 5" maximum). The usage amount can be altered according to the degree of body desired. The recommended usage in a 50 lb. machine is as follows:

Sheets & Pillowcases:	2 - 4 oz.
Shirts:	4 - 6 oz.
Coats, Uniforms & Aprons:	4 - 6 oz.
Table Linen:	5 - 8 oz.
