OS-100 OXYGEN SCAVANGER

This is a concentrated sodium sulphite product designed to be used as an oxygen scavenger in steam boilers and other water treatment applications.

DIRECTIONS: Estimate the amount of water in the boiler. As a recommended treatment, add 1 part to 20,000 parts of water in the system. Enough product should be added to the make-up water to provide a constant sulphite reading of 50-100 ppm.

The boiler water should be tested daily. The sample of boiler water to be analysed should be taken prior to blow down. A few gallons should be passed through before taking the sample.
